Antalya, Turkiye · BSc Computer Engineering, Akdeniz University

Summary

AI Engineer with **4 years of software engineering experience**, combining a background in backend systems, microservices, and full-stack development with AI engineering. Experienced in building **agentic systems**, **RAG pipelines**, and **agent harnesses**, including agent orchestration, tool calling, and MCP integration. Applies software engineering practices to develop reliable LLM applications and integrate them into production systems.

Experience

createanapi.com (PromoLink) Aug 2026 - Present
Full Stack AI Software Engineer · Remote, Arizona, USA

- Develop full-stack features and AI agents for **PromoLink, an e-commerce platform for promotional products**, using C#/.NET, React, AWS, and MongoDB.
- Build **agentic RAG product search** across a **400,000+ product catalog**, combining OpenSearch semantic retrieval and keyword search with price, quantity, and material filters.
- Build a **CMS agent** that creates and edits online stores from natural-language requests, using tool calling, schema validation, and live previews.
- Develop the **LLM-independent agent platform** behind these features, with reusable .NET tool handlers, retries, event recovery, embedding batching and caching, and concurrent retrieval.

SAN TSG (OctopusPlus) Nov 2024 - Jul 2026
Backend Software Engineer · Antalya, Turkiye

- Built a JWT-secured MCP server and LLM agent platform with runtime tool discovery for **30+ .NET microservices**.
- Developed a **RAG service** for technical documentation using Flask and ChromaDB; mentored 6 interns, one of whom was hired as a part-time engineer.
- Built and deployed **5 production microservices** for tourism bookings using C#/.NET, CQRS, Dapr, RabbitMQ, AWS EKS, and ArgoCD.

P.I. Works Jun 2023 - Sep 2024
Full Stack Software Developer · Remote, Istanbul, Turkiye

- Developed enterprise Angular and C#/.NET geolocation features, expanded unit-test coverage, and refactored code to improve maintainability.
- Built internal root-cause-analysis tools to track network mitigations, then Dockerized and deployed them through GitLab CI.

Linarit Dec 2021 - Sep 2022
Frontend Developer · Antalya, Turkiye

- Owned the React frontend for an industrial IoT dashboard within a **TÜBİTAK R&D project**; built real-time gRPC telemetry visualizations and optimized rendering and client-side caching.

Education

Master's in Computer Engineering 2026 - Present
Akdeniz University, Antalya

B.Sc. Computer Engineering 2019 - 2024
Akdeniz University, Antalya

Technical Skills

AI engineering: Agent orchestration, tool calling, RAG, embeddings, MCP, semantic search
Languages and frameworks: C#, .NET, Python, React, TypeScript, Flask, FastAPI
Data and infrastructure: OpenSearch, MongoDB, ChromaDB, PostgreSQL, Redis, Docker, AWS EKS/ECR

Projects

Tiro *tiro.legal*

- Built a cross-platform legal case manager with RAG; integrated a **local LLM runtime** and fine-tuned a model for legal workflows. Python, FastAPI, ChromaDB, Electron, React.

FitBrand *fitbrand.app*

- White-label trainer platform with AI workout plans and MCP tools, built with Next.js, Prisma, and PostgreSQL; supports branded PWAs and client management.
