PROFILE

AI Engineer building production LLM systems with **Python**, **LangChain**, **RAG**, and **MCP (Model Context Protocol)**. Strong foundation in **.NET** microservices, **AWS** cloud-native deployments, and distributed systems with **Dapr**. Currently shipping agentic systems over enterprise documentation.

EXPERIENCE

AI Engineer **SAN TSG**

Dec 2024 – Present | Antalya, Türkiye

- Engineered and led the **core MCP (Model Context Protocol) server** for **30+ .NET microservices**, exposing intent-shaped tools that reuse existing contracts and **JWT auth**, and architected an **LLM-independent AI Agent Service (Python LangChain + LangSmith)** with runtime tool discovery, demonstrating end-to-end full-stack ownership.
- Developed a **Python/Flask RAG (Retrieval-Augmented Generation) service** applying advanced NLP techniques over technical documentation and APIs to deliver precise, source-grounded answers (**ChromaDB**; live at **docs-ai.santsg.com**). Mentored 2 interns and brought on a CS student as a part-time engineer on the team.
- Created an automated **Python** service to collect employee utilization metrics from **Bitbucket**, **JIRA**, and worklogs, which includes email automation and is deployed to **AWS ECR**.
- Built and deployed **5 production .NET 10 microservices** end-to-end in a 30+ service tourism platform (excursion, flight, hotel booking) using **Clean/Onion architecture**, **CQRS (MediatR)**, and the **Dapr** sidecar (pub/sub over **RabbitMQ**) on **AWS EKS** (GitOps via **ArgoCD**).

Backend Software Engineer (Contract) **Mavi ArGe**

Oct 2024 – Dec 2024 | Antalya, Türkiye

- Developed **.NET REST APIs** for an EV charging station Fleet Management **IoT** system (**TÜBİTAK** project), including a rule-based engine for battery telemetry and monitoring dashboards.

Full Stack Software Developer **P.I. Works**

Jun 2023 – Sep 2024 | Remote, Istanbul, Türkiye

- Developed new features, increased unit test coverage, and refactored code smells for an **Angular-.NET** enterprise telco platform.

Frontend Developer **Linarit**

Feb 2022 – Sep 2022 | Antalya, Türkiye

- Developed key features for the **React-based Linarit PQM Industrial IoT platform**, including real-time **gRPC** data visualization across a **5-service microservices** architecture and IoT edge devices, with client-side caching and performance optimizations.

Founder Software Developer **AudioHealer**

Sep 2021 – Feb 2022 | Antalya, Türkiye

- Built AudioHealer, a full-stack AI-powered audio enhancement platform: **DTLN** (TensorFlow/Keras) neural network for real-time noise suppression, **FFmpeg** 18-band EQ and EBU R128 loudness normalization pipeline, **Flask** backend on **Google Cloud Run**, **Svelte** web frontend, and **Flutter** mobile client. Applied to Y Combinator.

SKILLS

Languages	Python, C#, JavaScript/TypeScript
AI / LLM	LangChain, LangGraph, MCP, RAG, OpenAI/Anthropic APIs, Ollama, ChromaDB, Embeddings, Prompt Engineering
Frameworks	Flask, .NET, FastAPI
Cloud & DevOps	AWS (ECR, ECS, Lambda, S3), Docker, Kubernetes
Data	RabbitMQ, Redis, PostgreSQL, ChromaDB
Architecture	REST APIs, Event-Driven Microservices, Dapr, Clean Architecture
Tools	Git, Linux, Vim, Tmux, Claude Code, VS Code

PROJECTS

Nand2Tetris – github.com/arinmis/nand2tetris

HDL, Python, Assembly — A full computer system implementation from boolean gates to a high-level language.

Tiro — tiro.legal

Python, FastAPI, Electron, React, SQLite, ChromaDB, llama-cpp — Desktop app for lawyers to manage case files with built-in local LLM (RAG) for document analysis. Cross-platform executable. Built with a part-time collaborator.

o-pt-pt — o-pt-pt.com

Next.js, React, Tamagui, Prisma, PostgreSQL — Multi-tenant SaaS for personal trainers to manage customers, workout plans, exercises, and progress tracking. Cross-platform UI (web + native) via Tamagui. Built with a part-time collaborator.

EDUCATION

B.Sc. Computer Engineering, Akdeniz University, Antalya

2019 – 2024
